Automation

IPAR's focus is on creating "low effort/high impact" programs that allow you and your team to spend less time on business tasks while still improving overall cash flow and market performance through innovation and automation.

Areas of automation we focus upon include the following:

- Contact capture via web site, social media and in-person along with ongoing communications
- Work order data capture and processing
- Customer tracking, billing and communications
- Payroll, payables and collections tasks

As each organization's automation situations are unique, IPAR uses our standard business approach to insure a solution that meets your business needs.
